

KUKA Robotics Laboratory (Venue E07)

- 2 x Kuka robots
- 2 x Motion training tables
- 2 x Block sets
- 1x Spot welding station
- HMI
- S7-300 Programmable Logic Controller
- Interbus communication network

The robot cell is used for basic and advance robotic training, for students and industry.

Basic robotic application can be used for training, but the cell is also capable of advanced robotic applications e.g. industrial spot welding, plasma cutting, 3D milling etc. Students can be trained in general robotics and specific applications e.g. Profibus, Interbus, spotwelding etc.
